

**The mitral regurgitation shown on the prior image typically occurs in which of the following clinical settings?**

- a. Rheumatic mitral valve disease
- b. Mitral valve prolapse
- c. Heart Block
- d. Mitral valve endocarditis
- e. Atrial fibrillation

**The mitral regurgitation shown on the prior image typically occurs in which of the following clinical settings?**

- a. Rheumatic mitral valve disease
- b. Mitral valve prolapse
- c. **Heart Block**
- d. Mitral valve endocarditis
- e. Atrial fibrillation

## Which statement about cases A-D is most accurate?

- a. Atrial fibrillation commonly complicates A
- b. The process shown in A is usually confined to the mitral valve only, fortunately
- c. Surgery is challenging, but usually the best strategy for C
- d. Surgery in C is risky because of proximity to the left circumflex artery
- e. D is always confined to the LV aspect of the mitral valve

## Which statement about cases A-D is most accurate?

- a. Atrial fibrillation commonly complicates A
- b. The process shown in A is usually confined to the mitral valve only, fortunately
- c. Surgery is challenging, but usually the best strategy for C
- d. Surgery in C is risky because of proximity to the left circumflex artery
- e. D is always confined to the LV aspect of the mitral valve

**The most likely diagnosis for clip D is:**

- a. Carcinoid affecting the MV
- b. Exposure to pergolide
- c. Bacterial endocarditis
- d. SLE**
- e. Rheumatic disease

**The most likely diagnosis for clip D is:**

- a. Carcinoid affecting the MV
- b. Exposure to pergolide
- c. Bacterial endocarditis
- d. SLE
- e. Rheumatic disease

## What procedure was performed between the 2 echo examinations?

1. AV repair
2. removal of LVAD
3. MV repair
4. Myectomy
5. ECMO instituted

## What procedure was performed between the 2 echo examinations?

1. AV repair
2. removal of LVAD
3. MV repair
4. Myectomy
5. ECMO instituted

# A 49 year old woman is in cardiogenic shock

*What is the most likely diagnosis?*

1. LBBB
2. Severe MR
3. Severe AR
4. None of the above

# A 49 year old woman is in cardiogenic shock

*What is the most likely diagnosis?*

1. LBBB
2. Severe MR
3. Severe AR
4. **None of the above**

The phenomenon shown is called:

- Broccoli phenonemon
- Brockenbrough phenomenon
- Brockovich phenomenon
- Butkus phenomenon
- Ebinger phemenon

The phenomenon shown is called:

- Broccoli phenonemon
- **Brockenbrough phenomenon**
- Brockovich phenomenon
- Butkus phenomenon
- Ebinger phemenon
